

Altiris® Solutions for Dell Servers and PCs

MAKING DELL SERVERS AND PCS THE EASIEST AND MOST COST-EFFECTIVE YOU CAN OWN

Dell and Altiris, two best-in-class companies, have combined their expertise to deliver a comprehensive server and client management solution for efficiency-minded IT organizations. “Both products are truly the best in their respective markets and both are the only products that have been able to meet our needs,” said Donald Rowland of HealthNow, New York. “When we learned that there was a partnership between the two, the choice was obvious. Now we have a standard hardware platform, a software solution to manage it, and the two are designed with each other in mind.”

CENTRALIZED, AUTOMATED SYSTEMS MANAGEMENT FROM DELL SIMPLIFIED ADMINISTRATION

The purpose of the integrated management solution is simple: arm IT professionals with centralized, remote management and automate common tasks associated with owning computer systems. The results are powerful: far fewer in-person visits and repetitive tasks, greater visibility and control of inventory and usage, and improved consistency and compliance in the way systems are configured. Organizations with as few as 100 servers and PCs will benefit, and larger, distributed organizations will experience even greater advantages from centralized, automated systems management.

And who is the biggest beneficiary? “The IT staff benefits the most,” said Kevin Simmons of SkyWest Airlines. “Every day they see how it saves them time, which saves the company money. In the past, we’ve had to put six or seven technicians on a plane to visit several locations each over two or three days’ time to fix a problem that one technician can now resolve from his PC.”

UNIFIED, EXPANDABLE ARCHITECTURE

The Altiris solutions for Dell servers and PCs are built on a modular architecture that easily adapts to the varying needs and types of organizations. Each solution simply “snaps” additional management capability into the Altiris unified management architecture, adhering to and leveraging the same familiar interface, the same database and same management agent. With Altiris, you outfit yourself with sufficient capability to produce the outcomes you want in the near term and easily adopt

additional capability—and the associated benefits—when you’re ready to take the next step. Adopting and deriving the benefits of centralized, automated client management has never been easier or more straightforward.

“Each new solution we try adds value,” said Greg Morrisse at Merrick & Co. “Altiris is an important part of the equation as we strive to meet our number one goal of transforming the IT organization into a proactive and strategic group that can help drive Merrick’s business forward.”

COMPREHENSIVE MANAGEMENT

From the same central management console and database, you can deploy, configure, monitor, patch, inventory, and more all of your Dell servers and Dell PCs. You can also manage servers and PCs from other manufacturers (though the Dell system management capabilities are greater as a result of the strategic partnership). A comprehensive and granular role and scope security model ensures that you can enjoy the best of both worlds: the ease and convenience of performing all management functions from one console balanced by role-appropriate access rights and permissions. Nobody provides more management capability from a single console and nobody provides more integrated management capabilities specifically for Dell systems. “That is the key,” Rowland said. “There are plenty of products on the market, but few are made to integrate seamlessly. When the leaders of two markets work together, the customer always benefits.”

“I’ve got to hand it to Dell for bringing Altiris to our company. Dell has always treated us very well systemwise, and the recommended Altiris solutions have really saved us.”

—TONY BRINDISI

“To be able to check on the status of the hardware will mean a better up time for the end user and we will be able to increase our productivity because instead of putting fires out, we will be proactive in our internal procedures for managing our desktops.”

—SCOTT READ
Network Analyst
Montana DOT

The following are Dell branded products based on the Altiris management platform. These Dell solutions, powered by Altiris, offer comprehensive management for Dell clients and servers.

DELL CLIENT MANAGER

Dell Client Manager software helps make Dell OptiPlex* desktops, Latitude* notebooks and Dell Precision* workstations the easiest and most cost effective client systems you can own. Dell Client Manager includes three levels—standard, plus, and Management Suite for Dell Clients, all of which snap into the common management architecture.

Dell Client Manager Standard software is a powerful hardware management solution for Dell Precision workstations, OptiPlex desktops, and Latitude notebooks. From a remote management console you can:

- > Identify, inventory, and add computers to the pool of managed resources.
- > Configure or update the BIOS of multiple computers simultaneously.
- > Monitor the health of key computers or computer sub components.

Dell Client Manager Plus software builds upon the hardware management capabilities of Dell Client Manager *Standard* by adding software-level management capabilities. From the same management console you can:

- > Migrate users to a new computer or operating system
- > Image a new computer or re-image an existing computer
- > Create software packages, distribute and install
- > Scan computers for detailed operating system and application information

Altiris® Management Suite™ for Dell Clients software builds on the hardware management capabilities of Dell Client Manager™ Plus by adding advanced software-level management capabilities. From the same management console you can:

- > Help ensure all computers are compliant with published security patches
- > Track the distribution and usage of software licenses
- > Establish and enforce system configuration and software usage policies
- > Troubleshoot a computer over a WAN

Tom Colgan, manager of IT operations at OSI Restaurant Partners (Outback Steakhouse and others), observes, “Since implementing the Altiris and Dell solution, quite a bit of time has been freed up to work on other projects and provide newer technologies to our restaurants. We’re no longer fighting fires. We’re no longer worried about having multiple people working on the same issue. With the all-in-one suite, we are able to solve restaurant issues in a more timely fashion.”

For more information about Dell Client Manager, visit www.altiris.com/dcm.

ALTIRIS® MANAGEMENT SUITE™ FOR DELL SERVERS

While the efficiency of centralized management is often the key benefit associated with PC management due to the large number and varying location of PCs, the automation capabilities are usually the most beneficial to server managers, whose goals include minimizing downtime, improving consistency, and delivering a high-level of service.

“Because of their mission-critical status, it’s even more important that our server management is automated by Altiris than our workstations,” said Kevin Little, director of Facilities and Technical Support at Lafayette School Corporation. “We need the proactive server protection that Altiris provides so we don’t have a failure that will take down hundreds of PCs. And again, the timesaving is significant.”

Altiris® Management Suite™ for Dell Servers software delivers essential Dell server management capability that snaps into the common management framework. From a single management console:

- > Centrally manage Dell servers and PCs from a single console (when combined with Dell Client Manager)
- > Manage servers running Windows, Linux or even virtual operating systems
- > Remotely deploy servers, including hardware configuration, OS and application installation
- > Inventory and update server BIOS, firmware and drivers
- > Monitor server hardware health, including thermals, voltages, global status, and more
- > Remotely deliver software packages and scripts to Windows and Linux servers

For more information about Dell server management, visit www.altiris.com/dsm.

The following products include Altiris management suites for client, server, asset, and security. These solutions share the same backend infrastructure as the Dell branded solutions described earlier in this document.

CLIENT MANAGEMENT SUITE™

Client Management Suite™ software is an easy-to-use systems management solution that reduces the total cost of ownership for desktops, notebooks, and handhelds. Developed for IT professionals who manage computing devices on a regular basis, the suite enables administrators to deploy, manage, and troubleshoot systems from virtually anywhere.

Client Management Suite provides several advantages within multiple levels of proactive client management.

LEVEL 1

Application Management Solution™ software collects and reports information about products installed by Microsoft Windows Installer (MSI). This helps you manage source paths, gather inventory about MSI applications, schedule regular application health check-ups, and automatically repair missing or changed files and/or registry values.

Application Metering Solution™ software determines which software applications and licenses are actually being used and how often enabling you to reclaim unused software licenses, eliminate or reallocate unused licenses, prepare internal audits, and plan for future software purchases. The solution reduces the costs and risks associated with overbuying and underbuying.

Carbon Copy® Solution software isn't your average remote control application—it provides access from a Web browser. Integrated client deployment and configuration simplifies distribution, while reports and notification policies track client installations and remote sessions.

Deployment Solution™ for Clients software helps cut the cost of deploying and managing the desktops, notebooks, and handhelds in your environment with an easy-to-use, integrated solution that provides OS deployment, configuration, computer “personality” migrations, and software deployment across hardware platforms and OS types.

Inventory Solution® for Clients software reduces the cost of identifying and managing heterogeneous devices throughout your enterprise. Easily track comprehensive hardware information, installed software packages, and operating system settings.

Data is normalized, consolidated, and secured in a central repository, enabling detailed reporting of asset information.

Patch Management Solution™ software lets you proactively manage patches and software updates by automating the collection, analysis, and delivery of patches across your enterprise. The solution can significantly help you decrease the costs of delivering patches throughout your enterprise.

Software Delivery Solution™ software provides secure, bandwidth-sensitive distribution of applications and updates across a LAN, WAN, or to remote and mobile clients. Advanced application management features include application self-healing, conflict analysis, and more.

LEVEL 2

AuditExpress™ software is the only vulnerability audit solution that combines the traditional functions of a vulnerability scanner and the core features of an audit tool. AuditExpress audits your desktops and notebooks and delivers audit results in easy-to-understand smart reports so you can quickly take action on identified system security vulnerabilities.

Local Recovery Pro™ software offers data and machine-state protection for your organization's desktop and notebook computers. Scheduled or user-driven snapshots are run unobtrusively and stored to a protected area on the local hard drive for complete and continual backup and recovery protection.

Real-Time System Manager Solution™ software lets you manage virtually any Windows computer remotely from a browser. Use Real-Time System Manager Solution to get real-time status and configuration data, and perform numerous diagnostic and management tasks.

Software Virtualization Solution™ software is a revolutionary approach to software management. By placing applications and data into managed units called Virtual Software Packages, Software Virtualization Solution allows you to instantly activate, deactivate or reset applications and to completely avoid conflicts between applications, without altering the base Windows installation.

Wise Package Studio® Professional Edition software provides everything you need to prepare applications for enterprise deployment. The industry's leading packaging solution allows you

“Altiris Client Management Suite has enabled us to avoid all the headaches that come with a large roll-out as it permitted us to manage the complete deployment and configuration of workstations from a single and intuitive console. Altiris Client Management Suite has not only kept the productivity loss and the cost of this project at a minimum, but also represents the key to overall systems management cost-savings and significantly enhanced levels of end-user satisfaction.”

—RICHARD MAY
Network Manager
Museum of London Group

altiris®

“New Wise Package Studio 6.0 capabilities will help us speed application development cycles while helping ensure conflict-free deployments. As applications become bigger and more complex, we are able to better manage them with a new lighter development client and server-side processing Patch risk and impact assessments are also significant pain points. Wise Package Studio will now be able to help us determine if our newly deployed applications and patches will have any negative impact on our target population..”

—ERIK McLAUGHLIN
Corporate IT Manager
Baptist Health South Florida

to efficiently capture legacy installations, migrate applications to the Windows Installer standard, fully customize application setups, and resolve conflicts prior to deployment.

LEVEL 3

Recovery Solution™ for Clients software protects your organization's computers with scheduled backups. Protection is automatic and doesn't require user intervention. Patented technology minimizes bandwidth usage making Recovery Solution an excellent choice for protecting remote and disconnected users.

OTHER CLIENT & MOBILE MANAGEMENT PRODUCTS

Handheld Management Suite™ software is an easy-to-use set of systems management tools designed to reduce high ownership costs, strengthen corporate data security, and increase productivity for a highly mobile workforce. Discover, manage, and secure Windows Mobile based Pocket PCs, Palm OS, and BlackBerry handheld assets.

Migration Suite™ software is a complete migration solution designed to assist you with migrating to Microsoft Windows 2000, Windows XP, or Windows Vista. Migration Suite provides pre-migration hardware and software assessment, OS deployment, software installation, personality restoration, and post-migration status reporting.

Software Delivery Suite™ software is a powerful set of tools that optimize software distribution across your enterprise. Proactively gather hardware and software inventory, manage patch and software updates and then automate distribution.

PACKAGING SOLUTIONS

Wise Package Studio® software is the premier application lifecycle management solution used by deployment and desktop management teams to prepare applications for the enterprise. Based on a structured process called enterprise software packaging, Wise Package Studio produces high-quality, reliable deployments that support corporate standards. Experience faster software rollouts, simplified Windows Installer migration and a greater return on Windows investments.

Wise for Windows Installer software is an installation authoring and management tool, used by corporate development teams to create reliable Windows Installer (.MSI) installations that decrease the risk of deployment errors.

Wise Installation System software is an easy-to-use, script-based installation tool that helps you create professional, reliable installations. Whether you need a quick and simple, reliable install, or advanced requirements such as Internet/intranet distribution, Windows CE installs, or application self-healing, Wise Installation System is the right script-based solution for you.

SERVICE & ASSET MANAGEMENT SUITE™

Service & Asset Management Suite™ software combines enterprise asset and service management disciplines into a single Web-based architecture, repository, and console. Manage the entire asset lifecycle: eliminate unnecessary software and hardware costs, proactively manage vendor contracts, and align service resources with ITIL to ensure IT investments are optimized.

LEVEL 1

Application Metering Solution™ software determines which software applications and licenses are actually being used and how often enabling you to reclaim unused software licenses, eliminate or reallocate unused licenses, prepare internal audits, and plan for future software purchases. The solution reduces the costs and risks associated with overbuying and underbuying.

Inventory Solution® for Clients software reduces the cost of identifying and managing heterogeneous devices throughout your enterprise. Easily track comprehensive hardware information, installed software packages, and operating system settings. Data is normalized, consolidated, and secured in a central repository, enabling detailed reporting of asset information.

LEVEL 2

Asset Control Solution™ software tracks non-discoverable and discoverable assets and applies hierarchical relationships with other assets, users, locations, departments, cost centers, and associated contracts, giving you a 360 degree view of all asset relationships. Reduce the risk associated with change, arm the help desk with information to accurately resolve incidents and problems, and obtain detailed costs analysis of each asset you own.

Barcode Solution™ software integrates with Service & Asset Management Suite to help you eliminate data input errors, accounting irregularities, and redundancies. Barcode Solution provides a simpler, more accurate way of gathering and verifying information in the field.

altiris®

“We are implementing Altiris Service & Asset Management Suite to better track and manage our fixed assets in addition to taking inventory of our software and hardware assets. It is easy for assets like phones, monitors, and chairs to get lost in a company of hundreds of end users. Service & Asset Management Suite gives us the ability to assign all assets to an individual user or department, track the use of those assets, and report on their total cost of ownership. Integrated asset management will help us save money on redundant or unused assets.”

—JOHN CHANDLER
Network Support Supervisor
OMD USA

altiris®

Connector Solution™ software integrates Altiris solutions with existing systems. Use Connector Solution to leverage user and organizational data from your HR system, cost information from your financial system, and other pertinent data from your critical business systems. The solution is a powerful way to connect information systems, giving you overall visibility into your organization.

Contract Management Solution™ software tracks the contracts associated with desktops, servers, fixed assets, and service agreements anywhere in your organization. Its comprehensive Web reports provide in-depth details of the objects under contract by correlating the contract data with actual system inventory, contact and location information, and associated costs.

LEVEL 3

Carbon Copy® Solution software isn't your average remote control application—it provides access from a Web browser. Integrated client deployment and configuration simplifies distribution, while reports and notification policies track client installations and remote sessions.

Helpdesk Solution™ software has revolutionized the service management environment. Based on categorization and asset type, the solution automatically provides technicians with a new level of integration leveraging Altiris analysis and system management tools to resolve incidents and problems and execute change activities without leaving the record. Technicians are provided native access to asset management data, Altiris system management tools, and embedded knowledge management. Plus, self-help tools let employees research knowledge base articles or enter their own service requests.

Real-Time System Manager Solution™ software lets you manage virtually any Windows computer remotely from a browser. Use Real-Time System Manager Solution to get real-time status and configuration data, and perform numerous diagnostic and management tasks.

OTHER SERVICE & ASSET MANAGEMENT SUITES

License Compliance Suite™ software captures detailed software inventory of installed applications across the network, and tracks usage data for each Windows application. The suite alerts IT staff when application installations exceed the number of purchased licenses.

SERVER MANAGEMENT SUITE™

Server Management Suite™ software is the industry's most complete set of essential server management tools integrated into a single management console. By automating time-consuming tasks, you can reduce human error, minimize server downtime, and save money. The suite allows you to improve system availability and reliability, and respond quickly to changing business requirements.

LEVEL 1

Application Management Solution™ software collects baseline information and performs regular compliance checks, allowing you to locate and repair conflicts before they cause problems. The solution provides a simple, accurate way to detect servers with non-standard configurations. Easy repair options return the software settings back to their original value.

Deployment Solution™ for Servers software helps you to quickly and easily deploy your servers from bare metal. Prebuilt deployment jobs specific for your servers provide management of hardware and system settings (including BIOS, RAID, and other component configurations) and allow you to deploy operating systems, install applications, and more.

Inventory Solution® for Servers software captures hardware information, installed software packages, operating system settings, and Microsoft SQL and Exchange application data on your servers. Data is captured and stored centrally for easy data correlation with other Altiris solutions.

Patch Management Solution™ software lets you proactively manage patches and software updates by automating the collection, analysis, and delivery of patches across your enterprise. The solution can significantly help you decrease the costs involved in patching your servers.

Software Delivery Solution™ software provides remote distribution of applications and scripts to Windows and Linux servers. Advanced management features include application self-healing, conflict analysis, and other ongoing software management capabilities.

LEVEL 2

AuditExpress™ software is the only vulnerability audit solution that combines the traditional functions of a vulnerability scanner and the core features of an audit tool. AuditExpress audits your servers and delivers audit results in easy-to-

“Server Management Suite offers a complete and powerful deployment environment with inventory, patch management, software delivery, remote control, monitoring, and app management capabilities. Managers willing to invest in the initial cost and configuration time should recover expenses rapidly.”

—INFOWORLD
Nov. 26, 2003

understand smart reports so you can quickly take action on identified system security vulnerabilities.

Recovery Solution™ for Servers software protects your organization’s servers with scheduled backups allowing you to recover lost data or roll back to a known good state.

Real-Time System Manager Solution™ software enables you to manage virtually any Windows server remotely from a browser. Use Real-Time System Manager Solution to get real-time status and configuration data, and perform numerous diagnostic and management tasks.

LEVEL 3

Monitor Solution™ for Servers software ensures server availability and reduces costs associated with server downtime through comprehensive, Web-based performance and event monitoring. Use real-time monitoring to assess current operational states, view historical data to identify trends and isolate recurring issues, and manage problem tasks with integrated alert management.

SECURITY & COMPLIANCE MANAGEMENT SOLUTIONS

Client Security Management Suite™ software’s unique, multi-layered approach to security and configuration management helps protect business assets against human, network and system-level threats and vulnerabilities. The suite helps you enforce standard security policies and other mandates without impacting employee productivity. Now you can proactively harden systems against security breaches, satisfy an increasing number of regulations, protect corporate information, and prevent network and application-based attacks.

AuditExpress™ software is the only vulnerability audit solution that combine the traditional functions of a vulnerability scanner. AuditExpress audits desktops, notebooks and servers and delivers audit results in easy-to-understand smart reports so you can quickly take action on identified system security vulnerabilities.

Deployment Solution™ for Network Devices software is the first step toward proactively isolating rogue devices on your network before they can cause harm. The solution helps you manage VLAN configurations on network devices across vendors. Deployment Solution for Network Devices models the physical connectivity of the network and can automatically assign devices to preconfigured VLANs.

Endpoint Security Solution™ software protects your corporate data and prevents malware and hackers from intruding on individual endpoints or the network itself. With extensive control over wireless networks, removable storage devices and applications, Altiris provides a single, centralized endpoint solution that maximizes worker productivity without sacrificing security.

Quarantine Solution™ software and Cisco’s Network Admission Control framework combine to provide CMDB-driven network access policies that defend your network from risks associated with open access. When used with other Altiris solutions, comprehensive endpoint assessments can result in hands-free, policy-based remediation to fix identified vulnerabilities.

SecurityExpressions™ software is the easiest-to-use and most scalable agentless and agent-based solution available for deploying and managing enterprise system security policies. Whether you choose an agentless or agent-based approach—or a combination of the two—the solution allows you to automatically audit, deploy and enforce system security policies across all Windows, UNIX and Linux desktops, notebooks, and servers in a fraction of the time previously required.

ALTIRIS CONNECTORS

Altiris Connector Solution™ software integrates Altiris solutions with existing systems. Use Connector Solution to leverage user and organizational data from your HR system, cost information from your financial system, and other pertinent data from your critical business systems. The solution is a powerful way to connect information systems, giving you overall visibility into your organization. Connector Solution is required for any of the following Altiris connector packs.

Altiris® Connector for IBM Director software allows you to generate reports on computers found in Director using Altiris Notification Server. You can launch contextual links to the Altiris Console from inside the Director Console, run reports on IBM-specific hardware, and forward Notification Server events to Director. The connector provides IBM Director users with upward integration to enterprise-class deployment, asset discovery, agent push and communication, automation, alerting, and reporting.

altiris®

“Enterprises that implement a vulnerability management process that includes vulnerability assessment, security policy audit and compliance, shielding and vulnerability mitigation will experience 90 percent fewer successful attacks than those that make an equal investment only in intrusion detection systems.”

—GARTNER
Mark Nicolett
VP of Security & Privacy

Altiris® Connector for HP OpenView software provides seamless integration that extends and enhances HP OpenView solutions, including Network Node Manager, Service Desk, and Operations. The complementary strengths of Altiris and HP solutions allow IT managers to implement a more comprehensive management solution that will prevent downtime, resolve problems faster and keep systems running efficiently. The Altiris IT lifecycle management strategy extends HP OpenView management to provide inventory, asset, software and configuration management for desktops, notebooks, handhelds, and servers.

Altiris® Connector for HP Systems Insight Manager software allows IT professionals to consolidate deployment and management of HP clients and servers within a single HP Systems Insight Manager console. The connector extends HP Systems Insight Manager core functionality with client deployment, HP client hardware management, and access to additional Altiris lifecycle management functionality.

Altiris® Connector for Microsoft SMS 2003 software allows you to extend the functionality of Altiris solutions to integrate with and leverage Microsoft Systems Management Server 2003. Use the connector to send Altiris Notification Server™ inventory data to Microsoft SMS 2003, then use your Altiris solutions to extend and enhance your Microsoft SMS 2003 infrastructure and more fully manage your enterprise.

Altiris® Connector for PeopleSoft software provides out-of-box integration with PeopleSoft Enterprise IT Asset Management to enable IT organizations to discover, track, and monitor usage of all IT assets. The connector provides efficient, one-way data transfer of Altiris Inventory Solution and Application Metering Solution data into the PeopleSoft Enterprise IT Asset Management repository.

Altiris® Connector for Remedy software allows you to extend your investment in the Remedy Action Request System platform and Remedy Help Desk and Asset Management applications with inventory data from Altiris’ award-winning Notification Server repository for quick access to accurate, detailed information.

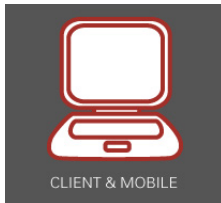

altiris®

"[Total Management Suite] will provide some impressive network control and management capabilities, and you'll spend far less of your time putting out fires."
—REDMONDMAG.COM
March 2005

**DECREASE COSTS WITH A TOTAL APPROACH—
ALTIRIS® TOTAL MANAGEMENT SUITE™
THE BEST ALTIRIS AND DELL HAVE TO OFFER IN A
SINGLE SUITE**

When you want the industry's most comprehensive suite of IT lifecycle automation solutions, Altiris® Total Management Suite™ software is the only choice. The suite combines integrated management tools for your organization's client, mobile, service, asset, server, and infrastructure needs.

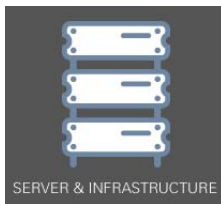

Client & Mobile

Altiris client and mobile management software includes easy-to-use systems management solutions that reduce the total cost of ownership for desktops, notebooks, and handhelds.

Service & Asset

Altiris service and asset management software combines enterprise asset and service management disciplines into a single Web-based architecture, repository, and console.

Server & Infrastructure

Altiris server and infrastructure management software is the industry's most complete set of essential server management tools integrated into a single management console.

HOW CAN TOTAL MANAGEMENT SUITE HELP YOUR ORGANIZATION?

Total Management Suite is designed to help your IT organization manage, secure and support all IT assets, promoting effective service delivery. With Total Management Suite you can reduce operational costs, increase operational efficiencies, set the foundation for future growth, and align IT with business priorities.

Unlike most systems management vendors, Total Management Suite's integrated IT lifecycle management solutions offer compelling benefits over point products that focus on only one or two aspects of IT management. Total Management Suite beats traditional systems management by providing the most complete, easy-to-use IT lifecycle management platform that helps you improve quality of service while reducing the cost of owning and managing your IT assets.

Use Total Management Suite to:

- > Increase quality of service; reduce costs
- > Gain visibility into and control over IT resources
- > Automate manual processes
- > Enforce system security
- > Standardize IT infrastructure
- > Meet compliance demands

Total Management Suite includes the best Altiris has to offer in a single suite.
